

Sample template for 18.376 problem set answer.

Here is a template that you can use to type your pset if you are new to LaTeX. This includes:

PSET1.tex

This is the main LaTeX file, which you run using your LaTeX program. Here it is filled with various examples of how to do various things. You will need to replace those by your own answers.

% If you are new to LaTeX, do not change anything above the
% line that says ``DOCUMENT STARTS HERE''.

PSET1.pdf

This is the pdf document that LaTeX should produce when you run PSET1.tex

% The following three are files with pictures.

autocatalysis.pdf

Convergence.png

growth.pdf

%

When you do your answers, using pictures can be very useful. You can produce the pictures by a program [like MatLab] or by scanning something you drew, or by doing them on an iPad, etc. As long as the pictures are in a standard format, like pdf, png, jpg, etc.; LaTeX should be able to handle them.

% PLEASE: do not go crazy with pictures. I do not want to see
% answers which have massive sizes due to the pictures in them.
