Gonorrhea

- While asymptotic it can cause:
    1. Pelvic inflammatory disease which can cause infertility
    2. Ectopic pregnancy-pregnancy in the fallopian tubes, which does not result in viable births
    3. Epididymitis-inflammation of testicles which can result in infertility
- If left untreated long term:
    1. Gonorrhea can spread to lungs, tissues, joints, bones, and the heart. Infections are characterized by lesions.
    2. Gonorrhea can be found in blood clots and can attack bones, the frequent target being the heel bones.

There are many different themes and styles that you can find (all free) online. Do a Google search for "Beamer class" or "Beamer latex" (without quotes in both cases).

Conclusions

Give some highlights or important results of your work here.

Acknowledgments

Use the official blurb from the Tecnical Report file.

Bibliography

- Give a brief list (5-10) of the key articles used. Your Technical Report will have the complete list.
