

Topology Seminar

Nathaniel Stapleton

of Universität Bonn will be speaking on

The character of the total power operation

on February 13 at 4:30 in
MIT Room 2-131

We construct a total power operation on n -fold class functions compatible with the total power operation in Morava E -theory through the character map of Hopkins, Kuhn, and Ravenel. In essence, this gives a formula for the total power operation in Morava E -theory applied to a finite group. This is joint work with Barthel.
