

PROBLEM SET 6 FOR 18.102
DUE FRIDAY APRIL 3, 2020

Problem 6.1

Give an example of a closed subset in a Hilbert space which is not weakly closed.

Problem 6.2

Let $A \in \mathcal{B}(H)$, H a separable Hilbert space, be such that for some orthonormal basis $\{e_i\}$

$$(6.1) \quad \sum_i \|Ae_i\|_H^2 < \infty.$$

Show that the same inequality is true for any other orthonormal basis and that A^* satisfies the same inequality.

Hint: For another basis, expand each norm $\|Ae_i\|^2$ using Bessel's identity and then use the adjoint identity and undo the double sum the opposite way.

Problem 6.3

The elements of $A \in \mathcal{B}(H)$ as in Problem 7.2 are called 'Hilbert-Schmidt operators'. Show that these form a 2-sided *-closed ideal $\text{HS}(H)$, inside the compact operators and that

$$(6.2) \quad \langle A, B \rangle = \sum_i \langle Ae_i, Be_i \rangle,$$

for any choice of orthonormal basis, makes this into a Hilbert space.

Problem 6.4

Consider the 'shift' operators $S : l^2 \rightarrow l^2$ and $T : l^2 \rightarrow l^2$ defined by

$$S(\{a_k\}_{k=1}^\infty) = \{b_k\}_{k=1}^\infty, \quad b_k = a_{k+1}, \quad k \geq 1,$$
$$T(\{a_k\}_{k=1}^\infty) = \{c_k\}_{k=1}^\infty, \quad c_1 = 0, \quad c_k = a_{k-1}, \quad k \geq 2.$$

Compute the norms of these operators and show that $TS = \text{Id} - \Pi_1$ and $ST = \text{Id}$ where $\Pi_1(\{a_k\}_{k=1}^\infty) = \{d_k\}$, $d_1 = a_1$, $d_k = 0$, $k \geq 2$.

Problem 6.5

If $K \in \mathcal{C}([0, 1] \times [0, 1])$ is a continuous function of two variables, show that

$$(6.3) \quad Af(x) = \int K(x, y)f(y)$$

defines a compact linear operator on $L^2(0, 1)$.

Problem 6.6-extra

With the operators as defined above, show that for any $B \in \mathcal{B}(l^2)$ with $\|B\| < 1$, $S + B$ is not invertible (and so conclude that the invertible operators are not dense in $\mathcal{B}(l^2)$).

Problem 6.7-extra

Suppose $K : L^2(0, 1) \rightarrow L^2(0, 1)$ is an integral operator (as considered above) with a continuous kernel $k \in \mathcal{C}([0, 1]^2)$,

$$(6.4) \quad Kf(x) = \int_{(0,1)} k(x, y)f(y)dy.$$

Show that K is Hilbert-Schmidt.
