# Enumerating permutations with singleton double descent sets 

Christopher Zhu<br>Mentor: Pakawut Jiradilok<br>The Roxbury Latin School<br>May 18-19, 2019<br>MIT PRIMES Conference

## Definitions and Terminology

■ Permutation in $\mathfrak{S}_{n}$ : rearrangement of $1,2, \ldots, n$; for example, a permutation in $\mathfrak{S}_{4}$ can map $1 \mapsto 3,2 \mapsto 1,3 \mapsto 4,4 \mapsto 2$

## Definitions and Terminology

■ Permutation in $\mathfrak{S}_{n}$ : rearrangement of $1,2, \ldots, n$; for example, a permutation in $\mathfrak{S}_{4}$ can map $1 \mapsto 3,2 \mapsto 1,3 \mapsto 4,4 \mapsto 2$

- Permutation written as a word: denote $w \in \mathfrak{S}_{n}$ as $w_{1} w_{2} \ldots w_{n}$, where $w$ maps $i \rightarrow w_{i}$ (above permutation is 3142)

## Definitions and Terminology

■ Permutation in $\mathfrak{S}_{n}$ : rearrangement of $1,2, \ldots, n$; for example, a permutation in $\mathfrak{S}_{4}$ can map $1 \mapsto 3,2 \mapsto 1,3 \mapsto 4,4 \mapsto 2$
■ Permutation written as a word: denote $w \in \mathfrak{S}_{n}$ as $w_{1} w_{2} \ldots w_{n}$, where $w$ maps $i \rightarrow w_{i}$ (above permutation is 3142)

- A permutation $w$ has a descent at index $i$ if $w_{i}>w_{i+1}$.

## Definitions and Terminology

■ Permutation in $\mathfrak{S}_{n}$ : rearrangement of $1,2, \ldots, n$; for example, a permutation in $\mathfrak{S}_{4}$ can map $1 \mapsto 3,2 \mapsto 1,3 \mapsto 4,4 \mapsto 2$

- Permutation written as a word: denote $w \in \mathfrak{S}_{n}$ as $w_{1} w_{2} \ldots w_{n}$, where $w$ maps $i \rightarrow w_{i}$ (above permutation is 3142)
- A permutation $w$ has a descent at index $i$ if $w_{i}>w_{i+1}$.
- Descent set of $w$ : set of all indices $i$ where $w$ has a descent: $\operatorname{Des}(3142)=\{1,3\}$.

## Definitions and Terminology

■ Permutation in $\mathfrak{S}_{n}$ : rearrangement of $1,2, \ldots, n$; for example, a permutation in $\mathfrak{S}_{4}$ can map $1 \mapsto 3,2 \mapsto 1,3 \mapsto 4,4 \mapsto 2$

- Permutation written as a word: denote $w \in \mathfrak{S}_{n}$ as $w_{1} w_{2} \ldots w_{n}$, where $w$ maps $i \rightarrow w_{i}$ (above permutation is 3142)
- A permutation $w$ has a descent at index $i$ if $w_{i}>w_{i+1}$.
- Descent set of $w$ : set of all indices $i$ where $w$ has a descent: $\operatorname{Des}(3142)=\{1,3\}$.
- $d(I ; n)=$ number of permutations in $\mathfrak{S}_{n}$ with descent set $I$

## Definitions and Terminology

■ Permutation in $\mathfrak{S}_{n}$ : rearrangement of $1,2, \ldots, n$; for example, a permutation in $\mathfrak{S}_{4}$ can map $1 \mapsto 3,2 \mapsto 1,3 \mapsto 4,4 \mapsto 2$

- Permutation written as a word: denote $w \in \mathfrak{S}_{n}$ as $w_{1} w_{2} \ldots w_{n}$, where $w$ maps $i \rightarrow w_{i}$ (above permutation is 3142)
- A permutation $w$ has a descent at index $i$ if $w_{i}>w_{i+1}$.
- Descent set of $w$ : set of all indices $i$ where $w$ has a descent: $\operatorname{Des}(3142)=\{1,3\}$.
- $d(I ; n)=$ number of permutations in $\mathfrak{S}_{n}$ with descent set $I$

## Example.

Permutations in $\mathfrak{S}_{5}$ with descents (bolded) at indices 1,3 , and 4: 21543, 41532, 51432, 31542, 53421, 43521, 52431, 42531, 32541 $\Rightarrow d(\{1,3,4\} ; 5)=9$.

## History and previous results

- MacMahon - in 1915 proved with inclusion/exclusion that $d(I ; n)$ is a polynomial in $n$

## History and previous results

- MacMahon - in 1915 proved with inclusion/exclusion that $d(I ; n)$ is a polynomial in $n$
■ Billey et al. - 2013 paper on peak polynomials

## History and previous results

- MacMahon - in 1915 proved with inclusion/exclusion that $d(I ; n)$ is a polynomial in $n$
■ Billey et al. - 2013 paper on peak polynomials
- peak of a permutation $w$ at index $i: w_{i-1}<w_{i}>w_{i+1}$
- $p(I ; n)$ is of the form $p(n) 2^{n-\# I-1}$

## History and previous results

- MacMahon - in 1915 proved with inclusion/exclusion that $d(I ; n)$ is a polynomial in $n$
■ Billey et al. - 2013 paper on peak polynomials
- peak of a permutation $w$ at index $i: w_{i-1}<w_{i}>w_{i+1}$

- bounds on roots of $d(I ; n)$ for certain sets $I$

## The double descent problem

■ Generalization? $\rightarrow$ Double descents (suggested by Dr. Khovanova)

## The double descent problem

■ Generalization? $\rightarrow$ Double descents (suggested by Dr. Khovanova)

## Definition.

A permutation $w \in \mathfrak{S}_{n}$ has a double descent at index $i$ if $w_{i-1}>w_{i}>w_{i+1}$. The double descent set of $w$ is the set of all $i$ corresponding to double descents.

## The double descent problem

■ Generalization? $\rightarrow$ Double descents (suggested by Dr. Khovanova)

## Definition.

A permutation $w \in \mathfrak{S}_{n}$ has a double descent at index $i$ if $w_{i-1}>w_{i}>w_{i+1}$. The double descent set of $w$ is the set of all $i$ corresponding to double descents.

- We write $d d(I ; n)$ to denote the number of permutations in $\mathfrak{S}_{n}$ with double descent set $l$.

## The double descent problem

■ Generalization? $\rightarrow$ Double descents (suggested by Dr. Khovanova)

## Definition.

A permutation $w \in \mathfrak{S}_{n}$ has a double descent at index $i$ if $w_{i-1}>w_{i}>w_{i+1}$. The double descent set of $w$ is the set of all $i$ corresponding to double descents.

- We write $d d(I ; n)$ to denote the number of permutations in $\mathfrak{S}_{n}$ with double descent set $l$.
■ What can we say about the function $d d(I ; n)$ ?

## The double descent problem

- Generalization? $\rightarrow$ Double descents (suggested by Dr. Khovanova)

## Definition.

A permutation $w \in \mathfrak{S}_{n}$ has a double descent at index $i$ if $w_{i-1}>w_{i}>w_{i+1}$. The double descent set of $w$ is the set of all $i$ corresponding to double descents.

■ We write $d d(I ; n)$ to denote the number of permutations in $\mathfrak{S}_{n}$ with double descent set $l$.

- What can we say about the function $d d(I ; n)$ ?
- Recursion?

## The double descent problem

- Generalization? $\rightarrow$ Double descents (suggested by Dr. Khovanova)

## Definition.

A permutation $w \in \mathfrak{S}_{n}$ has a double descent at index $i$ if $w_{i-1}>w_{i}>w_{i+1}$. The double descent set of $w$ is the set of all $i$ corresponding to double descents.

- We write $d d(I ; n)$ to denote the number of permutations in $\mathfrak{S}_{n}$ with double descent set $l$.
■ What can we say about the function $d d(I ; n)$ ?
- Recursion?
- Is it a polynomial? If not, can we study asymptotics?

## Singleton double descent sets

■ Define $f(n)$ using $d d(I ; n)$ and examine the sequence $\{f(i)\}_{i=1}^{\infty}$

## Singleton double descent sets

■ Define $f(n)$ using $d d(I ; n)$ and examine the sequence $\{f(i)\}_{i=1}^{\infty}$
■ $f(n)=d d(\emptyset ; n)$ : already exists on OEIS

## Singleton double descent sets

■ Define $f(n)$ using $d d(I ; n)$ and examine the sequence $\{f(i)\}_{i=1}^{\infty}$

- $f(n)=d d(\emptyset ; n)$ : already exists on OEIS
- $f(n)=\sum_{\# I=1} d d(I ; n)$ : already exists on OEIS

## Singleton double descent sets

■ Define $f(n)$ using $d d(I ; n)$ and examine the sequence $\{f(i)\}_{i=1}^{\infty}$

- $f(n)=d d(\emptyset ; n)$ : already exists on OEIS
- $f(n)=\sum_{\# I=1} d d(I ; n):$ already exists on OEIS
- $f(n)=\sum_{\# I=2} d d(I ; n):$ already exists on OEIS

## Singleton double descent sets

■ Define $f(n)$ using $d d(I ; n)$ and examine the sequence $\{f(i)\}_{i=1}^{\infty}$

- $f(n)=d d(\emptyset ; n)$ : already exists on OEIS
- $f(n)=\sum_{\# I=1} d d(I ; n):$ already exists on OEIS
- $f(n)=\sum_{\# I=2} d d(I ; n):$ already exists on OEIS

■ $f(n)=\sum_{\# I=3} d d(I ; n):$ already exists on OEIS... (etc.)

## Singleton double descent sets

■ Define $f(n)$ using $d d(I ; n)$ and examine the sequence $\{f(i)\}_{i=1}^{\infty}$

- $f(n)=d d(\emptyset ; n)$ : already exists on OEIS
- $f(n)=\sum_{\# I=1} d d(I ; n):$ already exists on OEIS
- $f(n)=\sum_{\# I=2} d d(I ; n):$ already exists on OEIS
- $f(n)=\sum_{\# I=3} d d(I ; n):$ already exists on OEIS... (etc.)

■ Fix a specific set $I$, such as $I=\{k\}$ for $k=2,3, \ldots$, and set $f(n)=d d(I ; n)$ : not found on OEIS!

## Singleton double descent sets

■ Define $f(n)$ using $d d(I ; n)$ and examine the sequence $\{f(i)\}_{i=1}^{\infty}$

- $f(n)=d d(\emptyset ; n)$ : already exists on OEIS
- $f(n)=\sum_{\# I=1} d d(I ; n):$ already exists on OEIS
- $f(n)=\sum_{\# I=2} d d(I ; n):$ already exists on OEIS
- $f(n)=\sum_{\# I=3} d d(I ; n):$ already exists on OEIS... (etc.)

■ Fix a specific set $I$, such as $I=\{k\}$ for $k=2,3, \ldots$, and set $f(n)=d d(I ; n)$ : not found on OEIS!
■ New goal: study permutations with singleton double descent sets

## Singleton double descent sets (cont'd)

## Theorem.

Let $I=\{m\}$ be a singleton set. Then we have

$$
\begin{aligned}
d d(I ; n+1)= & \sum_{k=m+1}^{n}\binom{n}{k} \cdot d d(I ; k) \cdot b_{n-k} \\
& +\binom{n}{m-2} \cdot d d(\emptyset ; m-2) \cdot\left(d d(\emptyset ; n-m+2)-b_{n-m+2}\right) \\
& +\sum_{k=0}^{m-4}\binom{n}{k} \cdot d d(\emptyset ; k) \cdot c(\{m-1-k\} ; n-k)
\end{aligned}
$$

where $c(I ; n)$ denotes the number of permutations in $\mathfrak{S}_{n}$ with an initial ascent and double descent set $I$, and $b_{n}$ denotes $c(\emptyset ; n)$.

- Proved the symmetry in each row
- Conjecture: approaches uniform distribution as $n$ grows large

## Conjecture.

$\{d d(\{i\} ; n)\}_{i=1}^{n}$ is asymptotically equidistributed. Namely, for fixed
$0<\alpha<\beta<1, \sum_{\alpha n<i<\beta n} d d(\{i\} ; n) \sim(\beta-\alpha) \sum_{i=2}^{n-1} d d(\{i\} ; n)$.

- Conjecture: "down up down up" pattern

■ Example $(n=10)$ : $171729>152289<182610>176049$

## Conjecture.

Given a fixed $n \in \mathbb{N}$, the numbers $d d(\{i\} ; n)$ for $2 \leq i<\left\lceil\frac{n}{2}\right\rceil$ follow a "down up down up" pattern. Namely, $d d(\{i\} ; n)>d d(\{i+1\} ; n)$ if $i$ is even, and $d d(\{i\} ; n)<d d(\{i+1\} ; n)$ if $i$ is odd.

## Rim hooks: an approach for asymptotics of $d d(I ; n)$

■ Rim hooks:
$\square$

## Rim hooks: an approach for asymptotics of $d d(1 ; n)$

- Rim hooks:
$\square$

## Definition.

A rim hook tableau is a filling of a rim hook with the numbers 1 through $n$, where $n$ is the length of the rim hook, satisfying the following rule: numbers must be arranged in the squares decreasing from bottom to top and increasing from left to right.

## Rim hooks: an approach for asymptotics of $d d(I ; n)$

- Rim hooks:
$\square$

## Definition.

A rim hook tableau is a filling of a rim hook with the numbers 1 through $n$, where $n$ is the length of the rim hook, satisfying the following rule: numbers must be arranged in the squares decreasing from bottom to top and increasing from left to right.

## Example.

## Connecting rim hooks with permutations

- Permutation can be written as a rim hook tableau:

## Connecting rim hooks with permutations

- Permutation can be written as a rim hook tableau:

- Descent information of permutation is encoded by the rim hook

## Connecting rim hooks with permutations

- Permutation can be written as a rim hook tableau:

- Descent information of permutation is encoded by the rim hook

## Example.

Double descent set $\{2\}$ :

## Connecting rim hooks to $d d(I ; n)$

## Definition.

$\mathcal{R}_{l}(n)$ : set of rim hooks of length $n$ which encode double descent set $I$.

## Connecting rim hooks to $d d(I ; n)$

## Definition.

$\mathcal{R}_{l}(n)$ : set of rim hooks of length $n$ which encode double descent set $I$.

## Example.

Elements in $\mathcal{R}_{\{2\}}(6)$ :

## Connecting rim hooks to $d d(1 ; n)$

## Definition.

$\mathcal{R}_{l}(n)$ : set of rim hooks of length $n$ which encode double descent set $I$.

## Example.

Elements in $\mathcal{R}_{\{2\}}(6)$ :

- This provides us with another way to express $d d(I ; n)$ :

$$
d d(I ; n)=\sum_{\mathfrak{r} \in \mathcal{R}_{l}(n)} f^{\mathfrak{r}}
$$

where $f^{\mathfrak{r}}$ denotes the number of valid tableaux for a rim hook $\mathfrak{r}$.

## Using rim hooks to estimate asymptotic growth

## Theorem.

$\# \mathcal{R}_{\{m\}}(n)=F_{n-m} F_{m-1}$, where $F_{n}$ is the $n$th Fibonacci number.

## Using rim hooks to estimate asymptotic growth

## Theorem.

$\# \mathcal{R}_{\{m\}}(n)=F_{n-m} F_{m-1}$, where $F_{n}$ is the $n$th Fibonacci number.

- This gives us a Fibonacci "mutliplication table"

| $m$ | $n$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ |
| ---: | ---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{1 1}$ |  |  |  |  |  |  |  |  |  |
| $\mathbf{2}$ | 1 | 1 | 2 | 3 | 5 | 8 | 13 | 21 | 34 |
| $\mathbf{3}$ | 0 | 1 | 1 | 2 | 3 | 5 | 8 | 13 | 21 |
| $\mathbf{4}$ | 0 | 0 | 2 | 2 | 4 | 6 | 10 | 16 | 26 |
| $\mathbf{5}$ | 0 | 0 | 0 | 3 | 3 | 6 | 9 | 15 | 24 |
| $\mathbf{6}$ | 0 | 0 | 0 | 0 | 5 | 5 | 10 | 15 | 25 |
| $\mathbf{7}$ | 0 | 0 | 0 | 0 | 0 | 8 | 8 | 16 | 24 |
| $\mathbf{8}$ | $\mathbf{0}$ | $\mathbf{0}$ | $\mathbf{0}$ | 0 | 0 | 0 | 13 | 13 | 26 |

## Current goals

■ Prove asymptotic uniformity for singleton double descent sets

## Current goals

- Prove asymptotic uniformity for singleton double descent sets

■ Prove the down-up conjecture for singleton double descent sets

## Current goals

- Prove asymptotic uniformity for singleton double descent sets

■ Prove the down-up conjecture for singleton double descent sets
■ Study double descent sets of other sizes

## Acknowledgements

I would like to thank the following:
■ My mentor Pakawut Jiradilok
■ Dr. Khovanova, Dr. Gerovitch, and the PRIMES program
