# Bernstein components for $p$-adic groups 

Maarten Solleveld<br>Radboud Universiteit Nijmegen

14 October 2020
$G$ : reductive group over a non-archimedean local field $F$ $\operatorname{Rep}(G)$ : category of smooth complex $G$-representations

## Bernstein decomposition

Direct product of categories $\operatorname{Rep}(G)=\prod_{\mathfrak{s}} \operatorname{Rep}(G)^{\mathfrak{s}}$
where $\mathfrak{s}$ is determined by a supercuspidal representation $\sigma$ of a Levi subgroup $M$ of $G$

We suppose that $M$ and $\sigma$ are given
Questions

- What does $\operatorname{Rep}(G)^{5}$ look like? Is it the module category of an explicit algebra?
- Can one classify $\operatorname{Irr}(G)^{\mathfrak{s}}=\operatorname{Irr}(G) \cap \operatorname{Rep}(G)^{\mathfrak{s}}$ ?
- Can one describe tempered/unitary/square-integrable representations in $\operatorname{Rep}(G)^{5}$ ?
$G$ : reductive group over a non-archimedean local field $F$ $\operatorname{Rep}(G)$ : category of smooth complex $G$-representations

# I. Bernstein components and a rough version of the new results 

## Bernstein components

$P=M U$ : parabolic subgroup of $G$ with Levi factor $M$
$I_{P}^{G}: \operatorname{Rep}(M) \rightarrow \operatorname{Rep}(P) \rightarrow \operatorname{Rep}(G):$ normalized parabolic induction

## Definition

For $\pi \in \operatorname{Irr}(G)$ :

- $\pi$ is supercuspidal if it does not occur in $I_{P}^{G}(\sigma)$ for any proper parabolic subgroup $P$ of $G$ and any $\sigma \in \operatorname{Irr}(M)$
- Supercuspidal support $\operatorname{Sc}(\pi)$ : a pair $(M, \sigma)$ with $\sigma \in \operatorname{Irr}(M)$, such that $\pi$ is a constituent of $I_{P}^{G}(\sigma)$ and $M$ is minimal for this property
$X_{\mathrm{nr}}(M)$ : group of unramified characters $M \rightarrow \mathbb{C}^{\times}$
$\mathcal{O} \subset \operatorname{Irr}(M):$ an $X_{\mathrm{nr}}(M)$-orbit of supercuspidal irreps
$\mathfrak{s}=[M, \mathcal{O}]: G$-association class of $(M, \mathcal{O})$

## Definition

$\operatorname{Irr}(G)^{\mathfrak{s}}=\{\pi \in \operatorname{Irr}(G): \operatorname{Sc}(\pi) \in[M, \mathcal{O}]\}$
$\operatorname{Rep}(G)^{\mathfrak{s}}=\left\{\pi \in \operatorname{Rep}(G):\right.$ all irreducible subquotients of $\pi$ lie in $\left.\operatorname{Irr}(G)^{\mathfrak{s}}\right\}$

## Bernstein components

$P=M U$ : parabolic subgroup of $G$ with Levi factor $M$
$I_{P}^{G}: \operatorname{Rep}(M) \rightarrow \operatorname{Rep}(P) \rightarrow \operatorname{Rep}(G):$ normalized parabolic induction

## Definition

For $\pi \in \operatorname{Irr}(G)$ :

- $\pi$ is supercuspidal if it does not occur in $I_{P}^{G}(\sigma)$ for any proper parabolic subgroup $P$ of $G$ and any $\sigma \in \operatorname{Irr}(M)$
- Supercuspidal support $\operatorname{Sc}(\pi)$ : a pair $(M, \sigma)$ with $\sigma \in \operatorname{Irr}(M)$, such that $\pi$ is a constituent of $I_{P}^{G}(\sigma)$ and $M$ is minimal for this property

```
Xnr}(M): group of unramified characters M ->\mathbb{C
O}\subset\operatorname{Irr}(M): an X Xr (M)-orbit of supercuspidal irrep
s}=[M,\mathcal{O}]:G\mathrm{ -association class of (M,O)
Definition
Irr(G)
Rep(G)
```

## Bernstein components

$P=M U$ : parabolic subgroup of $G$ with Levi factor $M$
$I_{P}^{G}: \operatorname{Rep}(M) \rightarrow \operatorname{Rep}(P) \rightarrow \operatorname{Rep}(G):$ normalized parabolic induction

## Definition

For $\pi \in \operatorname{Irr}(G)$ :

- $\pi$ is supercuspidal if it does not occur in $I_{P}^{G}(\sigma)$ for any proper parabolic subgroup $P$ of $G$ and any $\sigma \in \operatorname{Irr}(M)$
- Supercuspidal support $\operatorname{Sc}(\pi)$ : a pair $(M, \sigma)$ with $\sigma \in \operatorname{Irr}(M)$, such that $\pi$ is a constituent of $I_{P}^{G}(\sigma)$ and $M$ is minimal for this property
$X_{\mathrm{nr}}(M)$ : group of unramified characters $M \rightarrow \mathbb{C}^{\times}$
$\mathcal{O} \subset \operatorname{Irr}(M)$ : an $X_{\mathrm{nr}}(M)$-orbit of supercuspidal irreps
$\mathfrak{s}=[M, \mathcal{O}]: G$-association class of $(M, \mathcal{O})$
Definition
$\operatorname{Irr}(G)^{\mathfrak{s}}=\{\pi \in \operatorname{Irr}(G): \operatorname{Sc}(\pi) \in[M, \mathcal{O}]\}$
$\operatorname{Rep}(G)^{\mathfrak{s}}=\left\{\pi \in \operatorname{Rep}(G):\right.$ all irreducible subquotients of $\pi$ lie in $\left.\operatorname{Irr}(G)^{\mathfrak{s}}\right\}$

## Bernstein components

$P=M U$ : parabolic subgroup of $G$ with Levi factor $M$
$I_{P}^{G}: \operatorname{Rep}(M) \rightarrow \operatorname{Rep}(P) \rightarrow \operatorname{Rep}(G):$ normalized parabolic induction

## Definition

For $\pi \in \operatorname{Irr}(G)$ :

- $\pi$ is supercuspidal if it does not occur in $I_{P}^{G}(\sigma)$ for any proper parabolic subgroup $P$ of $G$ and any $\sigma \in \operatorname{Irr}(M)$
- Supercuspidal support $\operatorname{Sc}(\pi)$ : a pair $(M, \sigma)$ with $\sigma \in \operatorname{Irr}(M)$, such that $\pi$ is a constituent of $I_{P}^{G}(\sigma)$ and $M$ is minimal for this property
$X_{\mathrm{nr}}(M)$ : group of unramified characters $M \rightarrow \mathbb{C}^{\times}$
$\mathcal{O} \subset \operatorname{Irr}(M)$ : an $X_{\mathrm{nr}}(M)$-orbit of supercuspidal irreps
$\mathfrak{s}=[M, \mathcal{O}]: G$-association class of $(M, \mathcal{O})$

## Definition

$\operatorname{Irr}(G)^{\mathfrak{s}}=\{\pi \in \operatorname{Irr}(G): \operatorname{Sc}(\pi) \in[M, \mathcal{O}]\}$
$\operatorname{Rep}(G)^{\mathfrak{s}}=\left\{\pi \in \operatorname{Rep}(G)\right.$ : all irreducible subquotients of $\pi$ lie $\left.\operatorname{in} \operatorname{Irr}(G)^{\mathfrak{s}}\right\}$

## Iwahori-spherical component

I: an Iwahori subgroup of $G$

$$
\operatorname{Rep}(G)^{\prime}=\left\{(\pi, V) \in \operatorname{Rep}(G): V \text { is generated by } V^{\prime}\right\}
$$

The foremost example of a Bernstein component, for $\mathfrak{s}=\left[M, X_{\mathrm{nr}}(M)\right]$ where $M$ is a minimal Levi subgroup of $G$

Theorem (Borel, Iwahori-Matsumoto, Morris)
$\mathcal{H}(G, I):=C_{c}(I \backslash G / I)$ with the convolution product

- $\operatorname{Rep}(G)^{\prime}$ is equivalent with $\operatorname{Mod}(\mathcal{H}(G, I))$
- $\mathcal{H}(G, I)$ is isomorphic with an affine Hecke algebra

When $G$ is $F$-split, $M=T$ and these affine Hecke algebras are understood very well from Kazhdan-Lusztig

## Iwahori-spherical component

I: an Iwahori subgroup of $G$

$$
\operatorname{Rep}(G)^{\prime}=\left\{(\pi, V) \in \operatorname{Rep}(G): V \text { is generated by } V^{\prime}\right\}
$$

The foremost example of a Bernstein component, for $\mathfrak{s}=\left[M, X_{\mathrm{nr}}(M)\right]$ where $M$ is a minimal Levi subgroup of $G$

Theorem (Borel, Iwahori-Matsumoto, Morris) $\mathcal{H}(G, I):=C_{c}(I \backslash G / I)$ with the convolution product

- $\operatorname{Rep}(G)^{\prime}$ is equivalent with $\operatorname{Mod}(\mathcal{H}(G, I))$
- $\mathcal{H}(G, I)$ is isomorphic with an affine Hecke algebra

When $G$ is $F$-split, $M=T$ and these affine Hecke algebras are understood very well from Kazhdan-Lusztig

## Iwahori-spherical component

I: an Iwahori subgroup of $G$

$$
\operatorname{Rep}(G)^{\prime}=\left\{(\pi, V) \in \operatorname{Rep}(G): V \text { is generated by } V^{\prime}\right\}
$$

The foremost example of a Bernstein component, for $\mathfrak{s}=\left[M, X_{\mathrm{nr}}(M)\right]$ where $M$ is a minimal Levi subgroup of $G$

Theorem (Borel, Iwahori-Matsumoto, Morris)
$\mathcal{H}(G, I):=C_{c}(I \backslash G / I)$ with the convolution product

- $\operatorname{Rep}(G)^{\prime}$ is equivalent with $\operatorname{Mod}(\mathcal{H}(G, I))$
- $\mathcal{H}(G, I)$ is isomorphic with an affine Hecke algebra

When $G$ is $F$-split, $M=T$ and these affine Hecke algebras are understood very well from Kazhdan-Lusztig

## Iwahori-spherical component

I: an Iwahori subgroup of $G$

$$
\operatorname{Rep}(G)^{\prime}=\left\{(\pi, V) \in \operatorname{Rep}(G): V \text { is generated by } V^{\prime}\right\}
$$

The foremost example of a Bernstein component, for $\mathfrak{s}=\left[M, X_{\mathrm{nr}}(M)\right]$ where $M$ is a minimal Levi subgroup of $G$

Theorem (Borel, Iwahori-Matsumoto, Morris)
$\mathcal{H}(G, I):=C_{c}(I \backslash G / I)$ with the convolution product

- $\operatorname{Rep}(G)^{\prime}$ is equivalent with $\operatorname{Mod}(\mathcal{H}(G, I))$
- $\mathcal{H}(G, I)$ is isomorphic with an affine Hecke algebra

When $G$ is $F$-split, $M=T$ and these affine Hecke algebras are understood very well from Kazhdan-Lusztig

## Centre of a Bernstein component

$N_{G}(M)$ acts on $\operatorname{Rep}(M)$ by $(g \cdot \sigma)(m)=\sigma\left(g^{-1} m g\right)$

$$
W(M, \mathcal{O})=\left\{g \in N_{G}(M): g \text { stabilizes } \mathcal{O}\right\} / M
$$

$\mathbb{C}[\mathcal{O}]$ : ring of regular functions on the complex torus $\mathcal{O}$
Theorem (Bernstein, 1984)
The centre of $\operatorname{Rep}(G)^{\mathfrak{s}}$ is $\mathbb{C}[\mathcal{O}]^{W(M, \mathcal{O})}$
$\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O})]:=\mathbb{C}[\mathcal{O}] \otimes_{\mathbb{C}} \mathbb{C}[W(M, \mathcal{O})]$ with multiplication from $W(M, \mathcal{O})$-action on $\mathcal{O}$ :

$$
(f \otimes w)\left(f^{\prime} \otimes w^{\prime}\right)=f w\left(f^{\prime}\right) \otimes w w^{\prime}
$$

Main result (first rough version)
$\operatorname{Rep}(G)^{5}$ looks like $\operatorname{Mod}(\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O})])$

## Centre of a Bernstein component

$N_{G}(M)$ acts on $\operatorname{Rep}(M)$ by $(g \cdot \sigma)(m)=\sigma\left(g^{-1} m g\right)$

$$
W(M, \mathcal{O})=\left\{g \in N_{G}(M): g \text { stabilizes } \mathcal{O}\right\} / M
$$

$\mathbb{C}[\mathcal{O}]$ : ring of regular functions on the complex torus $\mathcal{O}$
Theorem (Bernstein, 1984)
The centre of $\operatorname{Rep}(G)^{\mathfrak{s}}$ is $\mathbb{C}[\mathcal{O}]^{W(M, \mathcal{O})}$
$\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O})]:=\mathbb{C}[\mathcal{O}] \otimes_{\mathbb{C}} \mathbb{C}[W(M, \mathcal{O})]$ with multiplication from $W(M, \mathcal{O})$-action on $\mathcal{O}$ :

$$
(f \otimes w)\left(f^{\prime} \otimes w^{\prime}\right)=f w\left(f^{\prime}\right) \otimes w w^{\prime}
$$

Main result (first rough version)
$\operatorname{Rep}(G)^{\mathfrak{s}}$ looks like $\operatorname{Mod}(\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O})])$

## Centre of a Bernstein component

$N_{G}(M)$ acts on $\operatorname{Rep}(M)$ by $(g \cdot \sigma)(m)=\sigma\left(g^{-1} m g\right)$

$$
W(M, \mathcal{O})=\left\{g \in N_{G}(M): g \text { stabilizes } \mathcal{O}\right\} / M
$$

$\mathbb{C}[\mathcal{O}]$ : ring of regular functions on the complex torus $\mathcal{O}$
Theorem (Bernstein, 1984)
The centre of $\operatorname{Rep}(G)^{5}$ is $\mathbb{C}[\mathcal{O}]^{W(M, \mathcal{O})}$
$\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O})]:=\mathbb{C}[\mathcal{O}] \otimes_{\mathbb{C}} \mathbb{C}[W(M, \mathcal{O})]$ with multiplication from $W(M, \mathcal{O})$-action on $\mathcal{O}$ :

$$
(f \otimes w)\left(f^{\prime} \otimes w^{\prime}\right)=f w\left(f^{\prime}\right) \otimes w w^{\prime}
$$

## Main result (first rough version)

$\operatorname{Rep}(G)^{\mathfrak{s}}$ looks like $\operatorname{Mod}(\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O})])$

## Centre of a Bernstein component

$N_{G}(M)$ acts on $\operatorname{Rep}(M)$ by $(g \cdot \sigma)(m)=\sigma\left(g^{-1} m g\right)$

$$
W(M, \mathcal{O})=\left\{g \in N_{G}(M): g \text { stabilizes } \mathcal{O}\right\} / M
$$

$\mathbb{C}[\mathcal{O}]$ : ring of regular functions on the complex torus $\mathcal{O}$
Theorem (Bernstein, 1984)
The centre of $\operatorname{Rep}(G)^{\mathfrak{s}}$ is $\mathbb{C}[\mathcal{O}]^{W(M, \mathcal{O})}$
$\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O})]:=\mathbb{C}[\mathcal{O}] \otimes_{\mathbb{C}} \mathbb{C}[W(M, \mathcal{O})]$ with multiplication from $W(M, \mathcal{O})$-action on $\mathcal{O}$ :

$$
(f \otimes w)\left(f^{\prime} \otimes w^{\prime}\right)=f w\left(f^{\prime}\right) \otimes w w^{\prime}
$$

Main result (first rough version)
$\operatorname{Rep}(G)^{\mathfrak{s}}$ looks like $\operatorname{Mod}(\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O})])$

## Approach with progenerators

$\Pi$ : progenerator of $\operatorname{Rep}(G)^{\mathfrak{s}}$
so $\Pi \in \operatorname{Rep}(G)^{5}$ is finitely generated, projective and $\operatorname{Hom}_{G}(\Pi, \rho) \neq 0$ for every $\rho \in \operatorname{Rep}(G)^{\mathfrak{s}} \backslash\{0\}$

Lemma (from category theory)

is an equivalence of categories

```
Setup of talk
Investigate the structure and the representation theory of End }\mp@subsup{E}{G}{}(\Pi)\mathrm{ ,
for a suitable progenerator \Pi of Rep(G)s
Draw consequences for Rep(G)
```

## Approach with progenerators

П: progenerator of $\operatorname{Rep}(G)^{\mathfrak{s}}$
so $\Pi \in \operatorname{Rep}(G)^{5}$ is finitely generated, projective and $\operatorname{Hom}_{G}(\Pi, \rho) \neq 0$ for every $\rho \in \operatorname{Rep}(G)^{\mathfrak{s}} \backslash\{0\}$

Lemma (from category theory)

| $\operatorname{Rep}(G)^{5}$ | $\longrightarrow$ | $\operatorname{End}_{G}(\Pi)-\operatorname{Mod}$ |
| :---: | :---: | :---: |
| $\rho$ | $\mapsto$ | $\operatorname{Hom}_{G}(\Pi, \rho)$ |
| $V \otimes_{\operatorname{End}_{G}(\Pi)} \Pi$ | $\longmapsto$ | $V$ |

is an equivalence of categories

```
Setup of talk
Investigate the structure and the representation theory of End G}(\Pi)\mathrm{ ,
for a suitable progenerator \Pi of Rep(G)s
Draw consequences for Rep(G)s
```

## Approach with progenerators

$\Pi$ : progenerator of $\operatorname{Rep}(G)^{5}$
so $\Pi \in \operatorname{Rep}(G)^{5}$ is finitely generated, projective and $\operatorname{Hom}_{G}(\Pi, \rho) \neq 0$ for every $\rho \in \operatorname{Rep}(G)^{\mathfrak{s}} \backslash\{0\}$

Lemma (from category theory)

| $\operatorname{Rep}(G)^{s}$ | $\longrightarrow$ | $\operatorname{End}_{G}(\Pi)-\operatorname{Mod}$ |
| :---: | :---: | :---: |
| $\rho$ | $\mapsto$ | $\operatorname{Hom}_{G}(\Pi, \rho)$ |
| $V \otimes_{\operatorname{End}_{G}(\Pi)} \Pi$ | $\longleftrightarrow$ | $V$ |

is an equivalence of categories

## Setup of talk

Investigate the structure and the representation theory of $\operatorname{End}_{G}(\Pi)$, for a suitable progenerator $\Pi$ of $\operatorname{Rep}(G)^{\mathfrak{s}}$
Draw consequences for $\operatorname{Rep}(G)^{\mathfrak{s}}$

## Comparison with types

$J \subset G$ compact open subgroup, $\quad \lambda \in \operatorname{Irr}(J)$
Suppose: $(J, \lambda)$ is a $\mathfrak{s}$-type, so
$\operatorname{Rep}(G)^{5}=\{\pi \in \operatorname{Rep}(G): \pi$ is generated by its $\lambda$-isotypical component $\}$
Bushnell-Kutzko: $\operatorname{Rep}(G)^{5}$ is equivalent with $\mathcal{H}(G, J, \lambda)$-Mod

## Consequences

- $\mathcal{H}(G, J, \lambda)$ and $\operatorname{End}_{G}(\Pi)$ are Morita equivalent
- In many cases $\operatorname{End}_{G}(\Pi)$ is Morita equivalent with an affine Hecke algebra

## Problems:

- It is not known whether every Bernstein component admits a type
- Even if you have $(J, \lambda)$, it can be difficult to analyse $\mathcal{H}(G, J, \lambda)$

## Comparison with types

$J \subset G$ compact open subgroup, $\quad \lambda \in \operatorname{Irr}(J)$
Suppose: $(J, \lambda)$ is a $\mathfrak{s}$-type, so
$\operatorname{Rep}(G)^{\mathfrak{s}}=\{\pi \in \operatorname{Rep}(G): \pi$ is generated by its $\lambda$-isotypical component $\}$
Bushnell-Kutzko: $\operatorname{Rep}(G)^{\mathfrak{s}}$ is equivalent with $\mathcal{H}(G, J, \lambda)$-Mod

## Consequences

- $\mathcal{H}(G, J, \lambda)$ and $\operatorname{End}_{G}(\Pi)$ are Morita equivalent
- In many cases $\operatorname{End}_{G}(\Pi)$ is Morita equivalent with an affine Hecke algebra

Problems:

- It is not known whether every Bernstein component admits a type
- Even if you have $(J, \lambda)$, it can be difficult to analyse $\mathcal{H}(G, J, \lambda)$

## Comparison with types

Suppose: $(J, \lambda)$ is a $\mathfrak{s}$-type, so
$\operatorname{Rep}(G)^{\mathfrak{s}}=\{\pi \in \operatorname{Rep}(G): \pi$ is generated by its $\lambda$-isotypical component $\}$
Bushnell-Kutzko: $\operatorname{Rep}(G)^{\mathfrak{s}}$ is equivalent with $\mathcal{H}(G, J, \lambda)$-Mod

## Consequences

- $\mathcal{H}(G, J, \lambda)$ and $\operatorname{End}_{G}(\Pi)$ are Morita equivalent
- In many cases $\operatorname{End}_{G}(\Pi)$ is Morita equivalent with an affine Hecke algebra

## Problems:

- It is not known whether every Bernstein component admits a type
- Even if you have $(J, \lambda)$, it can be difficult to analyse $\mathcal{H}(G, J, \lambda)$

# II. The structure of supercuspidal Bernstein components 

based on work of Roche

## Underlying tori

$$
\begin{aligned}
& \sigma \in \operatorname{Irr}(G) \text { supercuspidal } \\
& \mathcal{O}=\left\{\sigma \otimes \chi: \chi \in X_{\mathrm{nr}}(G)\right\} \\
& \text { Covering } X_{\mathrm{nr}}(G) \rightarrow \mathcal{O}: \chi \mapsto \sigma \otimes \chi
\end{aligned}
$$

## Example: $G L_{2}(F)$

$\chi_{-}$: quadratic unramified character of $G L_{2}(F)$
It is possible that $\sigma \otimes \chi_{-} \cong \sigma$,
see the book of Bushnell-Henniart
Then $\mathbb{C}^{\times} \cong X_{\mathrm{nr}}(G) \rightarrow \mathcal{O}$ is a degree two covering

```
\(X_{\mathrm{nr}}(G, \sigma):=\left\{\chi \in X_{\mathrm{nr}}(G): \sigma \otimes \chi \cong \sigma\right\}\), a finite group
\(X_{\mathrm{nr}}(G) / X_{\mathrm{nr}}(G, \sigma) \rightarrow \mathcal{O}\) is bijective, this makes \(\mathcal{O}\) a complex algebraic
torus (as variety)
```

## Underlying tori

$\sigma \in \operatorname{Irr}(G)$ supercuspidal
$\mathcal{O}=\left\{\sigma \otimes \chi: \chi \in X_{\mathrm{nr}}(G)\right\}$
Covering $X_{\mathrm{nr}}(G) \rightarrow \mathcal{O}: \chi \mapsto \sigma \otimes \chi$

Example: $G L_{2}(F)$
$\chi_{-}$: quadratic unramified character of $G L_{2}(F)$
It is possible that $\sigma \otimes \chi_{-} \cong \sigma$,
see the book of Bushnell-Henniart
Then $\mathbb{C}^{\times} \cong X_{\mathrm{nr}}(G) \rightarrow \mathcal{O}$ is a degree two covering

```
Xnr}(G,\sigma):={\chi\in\mp@subsup{X}{\textrm{nr}}{(G):\sigma\otimes\chi\cong\sigma}, a finite group
Xnr}(G)/\mp@subsup{X}{\textrm{nr}}{}(G,\sigma)->\mathcal{O}\mathrm{ is bijective, this makes }\mathcal{O}\mathrm{ a complex algebraic
torus (as variety)
```

## Underlying tori

$\sigma \in \operatorname{Irr}(G)$ supercuspidal
$\mathcal{O}=\left\{\sigma \otimes \chi: \chi \in X_{\mathrm{nr}}(G)\right\}$
Covering $X_{\mathrm{nr}}(G) \rightarrow \mathcal{O}: \chi \mapsto \sigma \otimes \chi$

Example: $G L_{2}(F)$
$\chi_{-}$: quadratic unramified character of $G L_{2}(F)$
It is possible that $\sigma \otimes \chi_{-} \cong \sigma$,
see the book of Bushnell-Henniart
Then $\mathbb{C}^{\times} \cong X_{\mathrm{nr}}(G) \rightarrow \mathcal{O}$ is a degree two covering
$X_{\mathrm{nr}}(G, \sigma):=\left\{\chi \in X_{\mathrm{nr}}(G): \sigma \otimes \chi \cong \sigma\right\}$, a finite group $X_{\mathrm{nr}}(G) / X_{\mathrm{nr}}(G, \sigma) \rightarrow \mathcal{O}$ is bijective, this makes $\mathcal{O}$ a complex algebraic torus (as variety)

## A progenerator

$G^{1}$ : subgroup of $G$ generated by all compact subgroups $\operatorname{ind}_{G^{1}}^{G}(\operatorname{triv}, \mathbb{C})=\mathbb{C}\left[G / G^{1}\right] \cong \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]$

## Lemma (Bernstein)

For $(\sigma, E) \in \operatorname{Irr}(G)$ supercuspidal
$\operatorname{ind}_{G^{1}}^{G}(\sigma)=E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]$
is a progenerator of $\operatorname{Rep}(G)^{\mathfrak{s}}$, with $\mathfrak{s}=[G, \mathcal{O}]=\left[G, X_{\mathrm{nr}}(G) \sigma\right]$

## Some endomorphisms of $E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]$

- $\mathbb{C}\left[X_{\mathrm{nr}}(G)\right] \subset \operatorname{End}_{G}\left(E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]\right)$, by multiplication operators
in combination with translation by $\chi$ on $X_{\mathrm{nr}}(G)$ that gives a
$\square$

## A progenerator

$G^{1}$ : subgroup of $G$ generated by all compact subgroups $\operatorname{ind}_{G^{1}}^{G}(\operatorname{triv}, \mathbb{C})=\mathbb{C}\left[G / G^{1}\right] \cong \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]$

## Lemma (Bernstein)

For $(\sigma, E) \in \operatorname{Irr}(G)$ supercuspidal
$\operatorname{ind}_{G^{1}}^{G}(\sigma)=E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]$
is a progenerator of $\operatorname{Rep}(G)^{\mathfrak{s}}$, with $\mathfrak{s}=[G, \mathcal{O}]=\left[G, X_{\mathrm{nr}}(G) \sigma\right]$

Some endomorphisms of $E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]$

- $\mathbb{C}\left[X_{n r}(G)\right] \subset \operatorname{End}_{G}\left(E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{n r}(G)\right]\right)$, by multiplication operators
in combination with translation by $\chi$ on $X_{\mathrm{nr}}(G)$ that gives a

## A progenerator

$G^{1}$ : subgroup of $G$ generated by all compact subgroups $\operatorname{ind}_{G^{1}}^{G}(\operatorname{triv}, \mathbb{C})=\mathbb{C}\left[G / G^{1}\right] \cong \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]$

## Lemma (Bernstein)

For $(\sigma, E) \in \operatorname{Irr}(G)$ supercuspidal
$\operatorname{ind}_{G^{1}}^{G}(\sigma)=E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]$
is a progenerator of $\operatorname{Rep}(G)^{\mathfrak{s}}$, with $\mathfrak{s}=[G, \mathcal{O}]=\left[G, X_{\mathrm{nr}}(G) \sigma\right]$

Some endomorphisms of $E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]$

- $\mathbb{C}\left[X_{\mathrm{nr}}(G)\right] \subset \operatorname{End}_{G}\left(E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]\right)$, by multiplication operators
- for $\chi \in X_{\mathrm{nr}}(G, \sigma): \sigma \cong \chi \otimes \sigma$
in combination with translation by $\chi$ on $X_{\mathrm{nr}}(G)$ that gives a
$\phi_{\chi} \in \operatorname{End}_{G}\left(E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]\right)$

## A progenerator

$G^{1}$ : subgroup of $G$ generated by all compact subgroups $\operatorname{ind}_{G^{1}}^{G}(\operatorname{triv}, \mathbb{C})=\mathbb{C}\left[G / G^{1}\right] \cong \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]$

## Lemma (Bernstein)

For $(\sigma, E) \in \operatorname{Irr}(G)$ supercuspidal
$\operatorname{ind}_{G^{1}}^{G}(\sigma)=E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]$
is a progenerator of $\operatorname{Rep}(G)^{\mathfrak{s}}$, with $\mathfrak{s}=[G, \mathcal{O}]=\left[G, X_{\mathrm{nr}}(G) \sigma\right]$

Some endomorphisms of $E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]$

- $\mathbb{C}\left[X_{\mathrm{nr}}(G)\right] \subset \operatorname{End}_{G}\left(E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]\right)$, by multiplication operators
- for $\chi \in X_{\mathrm{nr}}(G, \sigma): \sigma \cong \chi \otimes \sigma$
in combination with translation by $\chi$ on $X_{\mathrm{nr}}(G)$ that gives a $\phi_{\chi} \in \operatorname{End}_{G}\left(E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]\right)$

## Structure of endomorphism algebra

For $\chi, \chi^{\prime} \in X_{\mathrm{nr}}(G, \sigma)$ there exists $\mathfrak{h}\left(\chi, \chi^{\prime}\right) \in \mathbb{C}^{\times}$such that

$$
\phi_{\chi} \circ \phi_{\chi^{\prime}}=\mathfrak{h}\left(\chi, \chi^{\prime}\right) \phi_{\chi \chi^{\prime}}
$$

This gives a twisted group algebra $\mathbb{C}\left[X_{\mathrm{nr}}(G, \sigma), \mathfrak{t}\right]$ inside $\operatorname{End}_{G}\left(E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]\right)$

## Theorem (Roche)

End $_{G}\left(E \otimes \mathbb{C} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]\right) \cong \mathbb{C}\left[X_{\mathrm{nr}}(G)\right] \rtimes \mathbb{C}\left[X_{\mathrm{nr}}(G, \sigma), G\right]$
As vector space: $\mathbb{C}\left[X_{\mathrm{nr}}(G)\right] \otimes \mathbb{C}\left[X_{\mathrm{nr}}(G, \sigma), \measuredangle\right]$, with multiplication

$$
\left(f \otimes \phi_{\chi}\right)\left(f^{\prime} \otimes \phi_{\chi^{\prime}}\right)=f\left(f^{\prime} \circ m_{\chi}^{-1}\right) \otimes \mathfrak{h}\left(\chi, \chi^{\prime}\right) \phi_{\chi \chi^{\prime}}
$$

Properties, from $\operatorname{Rep}(G)^{5}$

- $\operatorname{Irr}\left(\operatorname{End}_{G}\left(E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]\right)\right) \longleftrightarrow X_{\mathrm{nr}}(G) / X_{\mathrm{nr}}(G, \sigma) \longleftrightarrow \mathcal{O}$
- $Z\left(\operatorname{End}_{G}\left(E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]\right)\right) \cong \mathbb{C}[\mathcal{O}]$

## Structure of endomorphism algebra

For $\chi, \chi^{\prime} \in X_{\mathrm{nr}}(G, \sigma)$ there exists $\mathfrak{b}\left(\chi, \chi^{\prime}\right) \in \mathbb{C}^{\times}$such that

$$
\phi_{\chi} \circ \phi_{\chi^{\prime}}=\mathrm{b}\left(\chi, \chi^{\prime}\right) \phi_{\chi \chi^{\prime}}
$$

This gives a twisted group algebra $\mathbb{C}\left[X_{\mathrm{nr}}(G, \sigma)\right.$, , $]$ inside $\operatorname{End}_{G}\left(E \otimes \mathbb{C} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]\right)$

Theorem (Roche)
$\operatorname{End}_{G}\left(E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]\right) \cong \mathbb{C}\left[X_{\mathrm{nr}}(G)\right] \rtimes \mathbb{C}\left[X_{\mathrm{nr}}(G, \sigma)\right.$, , $]$
As vector space: $\mathbb{C}\left[X_{\mathrm{nr}}(G)\right] \otimes \mathbb{C}\left[X_{\mathrm{nr}}(G, \sigma)\right.$, t$]$, with multiplication

$$
\left(f \otimes \phi_{\chi}\right)\left(f^{\prime} \otimes \phi_{\chi^{\prime}}\right)=f\left(f^{\prime} \circ m_{\chi}^{-1}\right) \otimes \mathfrak{b}\left(\chi, \chi^{\prime}\right) \phi_{\chi \chi^{\prime}}
$$

Properties, from $\operatorname{Rep}(G)^{5}$

```
- \(\operatorname{Irr}\left(\operatorname{End}_{G}\left(E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]\right)\right) \longleftrightarrow X_{\mathrm{nr}}(G) / X_{\mathrm{nr}}(G, \sigma) \longleftrightarrow \mathcal{O}\)
- \(Z\left(\operatorname{End}_{G}\left(E \otimes \mathbb{C} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]\right)\right) \cong \mathbb{C}[\mathcal{O}]\)
```

## Structure of endomorphism algebra

For $\chi, \chi^{\prime} \in X_{\mathrm{nr}}(G, \sigma)$ there exists $\mathrm{h}\left(\chi, \chi^{\prime}\right) \in \mathbb{C}^{\times}$such that

$$
\phi_{\chi} \circ \phi_{\chi^{\prime}}=\mathrm{b}\left(\chi, \chi^{\prime}\right) \phi_{\chi \chi^{\prime}}
$$

This gives a twisted group algebra $\mathbb{C}\left[X_{\mathrm{nr}}(G, \sigma)\right.$, , $]$ inside $\operatorname{End}_{G}\left(E \otimes \mathbb{C} \mathbb{C}\left[X_{\text {nr }}(G)\right]\right)$

Theorem (Roche)
$\operatorname{End}_{G}\left(E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(G)\right]\right) \cong \mathbb{C}\left[X_{\mathrm{nr}}(G)\right] \rtimes \mathbb{C}\left[X_{\mathrm{nr}}(G, \sigma)\right.$, , $]$
As vector space: $\mathbb{C}\left[X_{\mathrm{nr}}(G)\right] \otimes \mathbb{C}\left[X_{\mathrm{nr}}(G, \sigma)\right.$, t$]$, with multiplication

## III. Structure of non-supercuspidal Bernstein components

Motivated by work of Heiermann for classical p-adic groups

## A progenerator

$P=M U$ : parabolic subgroup of $G,(\sigma, E) \in \operatorname{Irr}(M)$ supercuspidal
$\mathcal{O}=X_{\mathrm{nr}}(M) \sigma, \quad \mathfrak{s}=[M, \mathcal{O}]$
Theorem (Bernstein)
$\Pi:=I_{P}^{G}\left(E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(M)\right]\right)$ is a progenerator of $\operatorname{Rep}(G)^{\mathfrak{s}}$
In particular $\operatorname{Rep}(G)^{\mathfrak{s}} \cong \operatorname{End}_{G}(\Pi)$-Mod
This is deep, it relies on second adjointness
$\operatorname{Via} I_{P}^{G}, \mathbb{C}\left[X_{\mathrm{nr}}(M)\right]$ embeds in $\operatorname{End}_{G}(\Pi)$
Lemma
$\rho \in \operatorname{Irr}(G)^{\mathfrak{s}}$. Suppose that the $\operatorname{End}_{G}(\Pi)$-module $\operatorname{Hom}_{G}(\Pi, \rho)$ has a
$\mathbb{C}\left[X_{\mathrm{nr}}(M)\right]$-weight $\chi$.
Then $\rho$ has supercuspidal support $(M, \sigma \otimes \chi)$.

## A progenerator

$P=M U$ : parabolic subgroup of $G,(\sigma, E) \in \operatorname{Irr}(M)$ supercuspidal
$\mathcal{O}=X_{\mathrm{nr}}(M) \sigma, \quad \mathfrak{s}=[M, \mathcal{O}]$
Theorem (Bernstein)
$\Pi:=I_{P}^{G}\left(E \otimes_{\mathbb{C}} \mathbb{C}\left[X_{\mathrm{nr}}(M)\right]\right)$ is a progenerator of $\operatorname{Rep}(G)^{\mathfrak{s}}$
In particular $\operatorname{Rep}(G)^{\mathfrak{s}} \cong \operatorname{End}_{G}(\Pi)$-Mod
This is deep, it relies on second adjointness
Via $I_{P}^{G}, \mathbb{C}\left[X_{\mathrm{nr}}(M)\right]$ embeds in $\operatorname{End}_{G}(\Pi)$
Lemma
$\rho \in \operatorname{Irr}(G)^{\mathfrak{s}}$. Suppose that the $\operatorname{End}_{G}(\Pi)$-module $\operatorname{Hom}_{G}(\Pi, \rho)$ has a

\end{aligned}
$$

## Structure of $\operatorname{End}_{G}(\Pi)$

$\mathbb{C}\left(X_{\mathrm{nr}}(M)\right)$ : quotient field of $\mathbb{C}\left[X_{\mathrm{nr}}(M)\right]$, rational functions on $X_{\mathrm{nr}}(M)$

## Main result (precise but weak version)

There exist a 2-cocycle $\hbar$ of $W\left(M, \sigma, X_{n r}(M)\right)$ and an algebra isomorphism
$\operatorname{End}_{G}(\Pi) \underset{\mathbb{C}\left[X_{\mathrm{nr}}(M)\right]}{\otimes} \mathbb{C}\left(X_{\mathrm{nr}}(M)\right) \cong \mathbb{C}\left(X_{\mathrm{nr}}(M)\right) \rtimes \mathbb{C}\left[W\left(M, \sigma, X_{\mathrm{nr}}(M)\right), দ\right]$

In some examples $\ddagger$ is nontrivial
This result only says something about $\operatorname{Rep}(G)^{\mathfrak{s}} \cong \operatorname{End}_{G}(\Pi)-M o d$ outside the tricky points of the cuspidal support variety $\mathcal{O}$

## Structure of $\operatorname{End}_{G}(\Pi)$

$\mathbb{C}\left(X_{\mathrm{nr}}(M)\right)$ : quotient field of $\mathbb{C}\left[X_{\mathrm{nr}}(M)\right]$, rational functions on $X_{\mathrm{nr}}(M)$
Main result (precise but weak version)
There exist a 2-cocycle $\ddagger$ of $W\left(M, \sigma, X_{\mathrm{nr}}(M)\right)$ and an algebra isomorphism
$\operatorname{End}_{G}(\Pi) \underset{\mathbb{C}\left[X_{\mathrm{nr}}(M)\right]}{\otimes} \mathbb{C}\left(X_{\mathrm{nr}}(M)\right) \cong \mathbb{C}\left(X_{\mathrm{nr}}(M)\right) \rtimes \mathbb{C}\left[W\left(M, \sigma, X_{\mathrm{nr}}(M)\right)\right.$, t]

In some examples $\bigsqcup$ is nontrivial
This result only says something about $\operatorname{Rep}(G)^{s} \cong \operatorname{End}_{G}(\Pi)-\operatorname{Mod}$ outside the tricky points of the cuspidal support variety $\mathcal{O}$

## Structure of $\operatorname{End}_{G}(\Pi)$

$\mathbb{C}\left(X_{\mathrm{nr}}(M)\right)$ : quotient field of $\mathbb{C}\left[X_{\mathrm{nr}}(M)\right]$, rational functions on $X_{\mathrm{nr}}(M)$
Main result (precise but weak version)
There exist a 2-cocycle $\ddagger$ of $W\left(M, \sigma, X_{\mathrm{nr}}(M)\right)$ and an algebra isomorphism

$$
\operatorname{End}_{G}(\Pi) \underset{\mathbb{C}\left[X_{\mathrm{nr}}(M)\right]}{\otimes} \mathbb{C}\left(X_{\mathrm{nr}}(M)\right) \cong \mathbb{C}\left(X_{\mathrm{nr}}(M)\right) \rtimes \mathbb{C}\left[W\left(M, \sigma, X_{\mathrm{nr}}(M)\right), \text {, }\right]
$$

In some examples $\bigsqcup$ is nontrivial
This result only says something about $\operatorname{Rep}(G)^{5} \cong \operatorname{End}_{G}(\Pi)$-Mod outside the tricky points of the cuspidal support variety $\mathcal{O}$

## IV. Links with affine Hecke algebras

## Sketch of an extended affine Hecke algebra

- Start with $\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O})]$
- $W(M, \mathcal{O})$ contains a normal reflection subgroup $W\left(\Sigma_{\mathcal{O}}\right)$
- Twist the multiplication in $\mathbb{C}[W(M, \mathcal{O})]$ by a 2-cocycle $\tilde{E}$ of $W(M, \mathcal{O}) / W\left(\Sigma_{\mathcal{O}}\right)$
- For every simple reflection $s_{\alpha} \in W\left(\Sigma_{\mathcal{O}}\right)$, replace the relation

$$
\begin{aligned}
& \left(s_{\alpha}+1\right)\left(s_{\alpha}-1\right)=0 \text { in } \mathbb{C}[W(M, \mathcal{O})] \text { by } \\
& \quad\left(T_{s_{\alpha}}+1\right)\left(T_{s_{\alpha}}-q_{F}^{\lambda(\alpha)}\right)=0 \quad \text { for some } \lambda(\alpha) \in \mathbb{R}_{\geq 0}
\end{aligned}
$$

- Adjust the multiplication relations between $\mathbb{C}[\mathcal{O}]$ and the $T_{s_{\alpha}}$
- This gives an algebra $\tilde{\mathcal{H}}(\mathcal{O})$ with the same underlying vector space $\mathbb{C}[\mathcal{O}] \otimes \mathbb{C}[W(M, \mathcal{O})], \quad \mathbb{C}[\mathcal{O}]$ is still a subalgebra

## Sketch of an extended affine Hecke algebra

- Start with $\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O})]$
- $W(M, \mathcal{O})$ contains a normal reflection subgroup $W\left(\Sigma_{\mathcal{O}}\right)$
- Twist the multiplication in $\mathbb{C}[W(M, \mathcal{O})]$ by a 2-cocycle $\tilde{G}$ of $W(M, \mathcal{O}) / W\left(\Sigma_{\mathcal{O}}\right)$
- For every simple reflection $s_{\alpha} \in W\left(\Sigma_{\mathcal{O}}\right)$, replace the relation $\left(s_{\alpha}+1\right)\left(s_{\alpha}-1\right)=0$ in $\mathbb{C}[W(M, \mathcal{O})]$ by

$$
\left(T_{s_{\alpha}}+1\right)\left(T_{s_{\alpha}}-q_{F}^{\lambda(\alpha)}\right)=0 \quad \text { for some } \lambda(\alpha) \in \mathbb{R}_{\geq 0}
$$

- Adjust the multiplication relations between $\mathbb{C}[\mathcal{O}]$ and the $T_{s_{\alpha}}$
- This gives an algebra $\tilde{\mathcal{H}}(\mathcal{O})$ with the same underlying vector space $\mathbb{C}[\mathcal{O}] \otimes \mathbb{C}[W(M, \mathcal{O})], \quad \mathbb{C}[\mathcal{O}]$ is still a subalgebra

## Sketch of an extended affine Hecke algebra

- Start with $\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O})]$
- $W(M, \mathcal{O})$ contains a normal reflection subgroup $W\left(\Sigma_{\mathcal{O}}\right)$
- Twist the multiplication in $\mathbb{C}[W(M, \mathcal{O})]$ by a 2-cocycle $\tilde{\square}$ of $W(M, \mathcal{O}) / W\left(\Sigma_{\mathcal{O}}\right)$
- For every simple reflection $s_{\alpha} \in W\left(\Sigma_{\mathcal{O}}\right)$, replace the relation

$$
\begin{aligned}
& \left(s_{\alpha}+1\right)\left(s_{\alpha}-1\right)=0 \text { in } \mathbb{C}[W(M, \mathcal{O})] \text { by } \\
& \quad\left(T_{s_{\alpha}}+1\right)\left(T_{s_{\alpha}}-q_{F}^{\lambda(\alpha)}\right)=0 \quad \text { for some } \lambda(\alpha) \in \mathbb{R}_{\geq 0}
\end{aligned}
$$

- Adjust the multiplication relations between $\mathbb{C}[\mathcal{O}]$ and the $T_{s_{\alpha}}$
- This gives an algebra $\tilde{\mathcal{H}}(\mathcal{O})$ with the same underlying vector space $\mathbb{C}[\mathcal{O}] \otimes \mathbb{C}[W(M, \mathcal{O})], \quad \mathbb{C}[\mathcal{O}]$ is still a subalgebra

## Localization

We analyse the category of those $\operatorname{End}_{G}(\Pi)$-modules, all whose $\mathbb{C}\left[X_{\mathrm{nr}}(M)\right]$-weights lie in a specified subset $U \subset X_{\mathrm{nr}}(M)$
These are related to $\tilde{\mathcal{H}}(\mathcal{O})$-modules with $\mathbb{C}[\mathcal{O}]$-weights in $\{\sigma \otimes \chi: \chi \in U\}$
Polar decomposition

$$
\begin{aligned}
X_{\mathrm{nr}}(M)=\operatorname{Hom}\left(M / M^{1}, \mathbb{C}^{\times}\right) & =\operatorname{Hom}\left(M / M^{1}, S^{1}\right) \times \operatorname{Hom}\left(M / M^{1}, \mathbb{R}_{>0}\right) \\
& =\quad X_{\mathrm{unr}}(M) \times \quad X_{\mathrm{nr}}^{+}(M)
\end{aligned}
$$

Fix any $u \in \operatorname{Hom}\left(M / M^{1}, S^{1}\right)$ and define

$$
\begin{aligned}
& U=W\left(M, \sigma, X_{\mathrm{nr}}(M)\right) u X_{\mathrm{nr}}^{+}(M) \\
& \tilde{U}=\text { image of } U \text { in } \mathcal{O}=W(M, \mathcal{O})\left\{\sigma \otimes u \chi: \chi \in X_{\mathrm{nr}}^{+}(M)\right\}
\end{aligned}
$$

## Localization

\end{aligned}
$$

## Main result

$G$ : reductive $p$-adic group
$\mathcal{O}=\left\{\sigma \otimes \chi: \chi \in X_{\mathrm{nr}}(M)\right\}, \mathfrak{s}=[M, \mathcal{O}]$
$\Pi$ : progenerator of Bernstein block $\operatorname{Rep}(G)^{\mathfrak{s}}$
$\tilde{\mathcal{H}}(\mathcal{O})$ constructed by modification of $\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O})]$ (with certain specific parameters $q_{F}^{\lambda(\alpha)}$ )
$u \in \operatorname{Hom}\left(M / M^{1}, S^{1}\right), U=W\left(M, \sigma, X_{\mathrm{nr}}(M)\right) u X_{\mathrm{nr}}^{+}(M)$
$\tilde{U}$ : image of $U$ in $\mathcal{O}$

Theorem
There are equivalences between the following categories

- $\left\{\pi \in \operatorname{Rep}_{\mathrm{ff}}(G)^{s}: \operatorname{Sc}(\pi) \subset(M, \tilde{U})\right\} \quad$ (fl : finite length)
- $\left\{V \in \operatorname{End}_{G}(\Pi)-\operatorname{Mod}_{\mathrm{fl}}\right.$ : all $\mathbb{C}\left[X_{\mathrm{nr}}(M)\right]$-weights of $V$ in $\left.U\right\}$
- $\left\{\tilde{V} \in \tilde{\mathcal{H}}(\mathcal{O})-\operatorname{Mod}_{\mathrm{f}}\right.$ : all $\mathbb{C}[\mathcal{O}]$-weights of $\tilde{V}$ in $\left.\tilde{U}\right\}$

## Main result

# V. Classification of irreducible representations in $\operatorname{Rep}(G)^{5}$ 

## Representations of affine Hecke algebras

- From the equivalence $\operatorname{Rep}_{f f}(G)^{\mathfrak{s}} \cong \tilde{\mathcal{H}}(\mathcal{O})-\operatorname{Mod}_{\mathrm{f}}$, $\operatorname{Irr}(G)^{5}$ can be determined in terms of affine Hecke algebras
- The irreps of an affine Hecke algebra are known in principle, but their classification is involved

## Replacing $q_{F}$ by 1 in affine Hecke algebras

- $q_{F}=1$-version of $\tilde{\mathcal{H}}(\mathcal{O}): \quad \mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O}), \tilde{A}]$
- Its representation theory is easy, with Clifford theory

## Representations of affine Hecke algebras

- From the equivalence $\operatorname{Rep}_{f( }(G)^{\mathfrak{s}} \cong \tilde{\mathcal{H}}(\mathcal{O})-\operatorname{Mod}_{\mathrm{f}}$, $\operatorname{Irr}(G)^{5}$ can be determined in terms of affine Hecke algebras
- The irreps of an affine Hecke algebra are known in principle, but their classification is involved

Replacing $q_{F}$ by 1 in affine Hecke algebras

- $q_{F}=1$-version of $\tilde{\mathcal{H}}(\mathcal{O}): \quad \mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O}), \tilde{\text { un }}]$
- Its representation theory is easy, with Clifford theory

## Classification of tempered irreps

Assume that $\sigma \otimes u \in \operatorname{Irr}(M)$ is supercuspidal and unitary/tempered

## Theorem

There exist canonical bijections between the following sets

- $\left\{\pi \in \operatorname{Irr}(G)^{\mathfrak{s}}: \pi\right.$ tempered, $\left.\operatorname{Sc}(\pi) \in\left(M, \sigma \otimes u X_{\mathrm{nr}}^{+}(M)\right)\right\}$
- $\{\tilde{V} \in \operatorname{Irr}(\tilde{\mathcal{H}}(\mathcal{O})): \tilde{V}$ tempered, $\tilde{V}$ has a $\mathbb{C}[\mathcal{O}]$-weight in $\left.\sigma \otimes u X_{\mathrm{nr}}^{+}(M)\right\}$
- $\{V \in \operatorname{Irr}(\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, O), \tilde{q}]): V$ tempered, with a $\mathbb{C}[\mathcal{O}]$-weight
- $\operatorname{Irr}\left(\mathbb{C}\left[W(M, \mathcal{O})_{\sigma \otimes u}, \tilde{t}\right]\right)$

```
W(M,\mathcal{O}\mp@subsup{)}{\sigma\otimesu}{}\mathrm{ embeds in W(M, },\mp@subsup{,}{~}{nr}(M))
\tilde{4}}\mp@subsup{W}{(M,O}{(M\otimesu
```

## Classification of tempered irreps

Assume that $\sigma \otimes u \in \operatorname{Irr}(M)$ is supercuspidal and unitary/tempered
Theorem
There exist canonical bijections between the following sets

- $\left\{\pi \in \operatorname{Irr}(G)^{\mathfrak{s}}: \pi\right.$ tempered, $\left.\operatorname{Sc}(\pi) \in\left(M, \sigma \otimes u X_{\mathrm{nr}}^{+}(M)\right)\right\}$
- $\{\tilde{V} \in \operatorname{Irr}(\tilde{\mathcal{H}}(\mathcal{O})): \tilde{V}$ tempered, $\tilde{V}$ has a $\mathbb{C}[\mathcal{O}]$-weight in $\left.\sigma \otimes u X_{\mathrm{nr}}^{+}(M)\right\}$
- $\{V \in \operatorname{Irr}(\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O}), \tilde{t}]): V$ tempered, with a $\mathbb{C}[\mathcal{O}]$-weight $\sigma \otimes u\}$
- $\operatorname{Irr}\left(\mathbb{C}\left[W(M, \mathcal{O})_{\sigma \otimes u}, \tilde{q}\right]\right)$

```
W(M,O)
\tilde{b}}\mp@subsup{W}{(M,O)}{\sigma\otimesu
```

## Classification of tempered irreps

Assume that $\sigma \otimes u \in \operatorname{Irr}(M)$ is supercuspidal and unitary/tempered

## Theorem

There exist canonical bijections between the following sets

- $\left\{\pi \in \operatorname{Irr}(G)^{\mathfrak{s}}: \pi\right.$ tempered, $\left.\operatorname{Sc}(\pi) \in\left(M, \sigma \otimes u X_{\mathrm{nr}}^{+}(M)\right)\right\}$
- $\{\tilde{V} \in \operatorname{Irr}(\tilde{\mathcal{H}}(\mathcal{O})): \tilde{V}$ tempered, $\tilde{V}$ has a $\mathbb{C}[\mathcal{O}]$-weight in $\left.\sigma \otimes u X_{\mathrm{nr}}^{+}(M)\right\}$
- $\{V \in \operatorname{Irr}(\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O}), \tilde{t}]): V$ tempered, with a $\mathbb{C}[\mathcal{O}]$-weight $\sigma \otimes u\}$
- $\operatorname{Irr}\left(\mathbb{C}\left[W(M, \mathcal{O})_{\sigma \otimes u}, \tilde{t}\right]\right)$

```
W(M,O)
\tilde{b}}\mp@subsup{W}{(M,O)}{\sigma\otimesu
```

## Classification of tempered irreps

Assume that $\sigma \otimes u \in \operatorname{Irr}(M)$ is supercuspidal and unitary/tempered

## Theorem

There exist canonical bijections between the following sets

- $\left\{\pi \in \operatorname{Irr}(G)^{\mathfrak{s}}: \pi\right.$ tempered, $\left.\operatorname{Sc}(\pi) \in\left(M, \sigma \otimes u X_{\mathrm{nr}}^{+}(M)\right)\right\}$
- $\{\tilde{V} \in \operatorname{Irr}(\tilde{\mathcal{H}}(\mathcal{O})): \tilde{V}$ tempered, $\tilde{V}$ has a $\mathbb{C}[\mathcal{O}]$-weight in $\left.\sigma \otimes u X_{\mathrm{nr}}^{+}(M)\right\}$
- $\{V \in \operatorname{Irr}(\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O}), \tilde{t}]): V$ tempered, with a $\mathbb{C}[\mathcal{O}]$-weight $\sigma \otimes u\}$
- $\operatorname{Irr}\left(\mathbb{C}\left[W(M, \mathcal{O})_{\sigma \otimes u}, \tilde{t}\right]\right)$
$W(M, \mathcal{O})_{\sigma \otimes u}$ embeds in $W\left(M, \sigma, X_{\mathrm{nr}}(M)\right)$
$\left.\tilde{\square}\right|_{W(M, \mathcal{O})_{\sigma \otimes u}}$ comes from the 2-cocycle $\ddagger$ of $W\left(M, \sigma, X_{\mathrm{nr}}(M)\right)$

## Classification of irreducible representations

Theorem
There exist canonical bijections between the following sets

- $\operatorname{Irr}(G)^{5}$
- $\operatorname{Irr}\left(\mathbb{C}\left[X_{\mathrm{nr}}(M)\right] \rtimes \mathbb{C}\left[W\left(M, \sigma, X_{\mathrm{nr}}(M)\right), দ\right]\right)$
- $\operatorname{Irr}(\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O}), \tilde{f}])$
- $\left\{\left(\sigma^{\prime}, \rho\right): \sigma^{\prime} \in \mathcal{O}, \rho \in \operatorname{Irr}\left(\mathbb{C}\left[W(M, \mathcal{O})_{\sigma^{\prime}}, \tilde{f}\right]\right)\right\} / W(M, \mathcal{O})$

The last item is also known as a twisted extended quotient

$$
(\mathcal{O} / / W(M, O))_{t}
$$

The bijection between that and $\operatorname{Irr}(G)^{5}$ was conjectured by ABPS

## Classification of irreducible representations

## Theorem

There exist canonical bijections between the following sets

- $\operatorname{Irr}(G)^{5}$
- $\left.\operatorname{Irr}\left(\mathbb{C}\left[X_{\mathrm{nr}}(M)\right] \rtimes \mathbb{C}\left[W\left(M, \sigma, X_{\mathrm{nr}}(M)\right), ~, ~\right]\right]\right)$
- $\operatorname{Irr}(\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O}), \tilde{G}])$
- $\left\{\left(\sigma^{\prime}, \rho\right): \sigma^{\prime} \in \mathcal{O}, \rho \in \operatorname{Irr}\left(\mathbb{C}\left[W(M, \mathcal{O})_{\sigma^{\prime}}, \tilde{\tilde{G}}\right]\right)\right\} / W(M, \mathcal{O})$

The last item is also known as a twisted extended quotient

$$
(\mathcal{O} / / W(M, \mathcal{O}))_{\natural}
$$

The bijection between that and $\operatorname{Irr}(G)^{5}$ was conjectured by ABPS

## Summary

For an arbitrary Bernstein block $\operatorname{Rep}(G)^{5}$ of a reductive $p$-adic group $G$ :

- $\operatorname{Rep}_{\mathrm{fl}}(G)^{\mathfrak{s}}$ is equivalent with the category of finite length modules of an extended affine Hecke algebra $\tilde{\mathcal{H}}(\mathcal{O})$, whose $q_{F}=1$-form is $\mathbb{C}[\mathcal{O}] \rtimes \mathbb{C}[W(M, \mathcal{O}), \tilde{G}]$
- Upon tensoring with $\mathbb{C}\left(X_{\mathrm{nr}}(M)\right)$ over $\mathbb{C}\left[X_{\mathrm{nr}}(M)\right]$, or upon taking irreducible representations, $\operatorname{Rep}(G)^{\mathfrak{s}}$ becomes equivalent with $\mathbb{C}\left[X_{\mathrm{nr}}(M)\right] \rtimes \mathbb{C}\left[W\left(M, \sigma, X_{\mathrm{nr}}(M)\right), দ\right]-\operatorname{Mod}$

Questions / open problems

- Can one use the above to study unitarity of G-representations?
- Can the parameters $q_{F}^{\lambda(\alpha)}$ of $\tilde{\mathcal{H}}(\mathcal{O})$ be described in terms of $\sigma$ or $\mathcal{O}$ ? Are the $\lambda(\alpha)$ integers?
- How to determine the 2-cocycles $\ddagger$ of $W\left(M, \sigma, X_{\mathrm{nr}}(M)\right)$ ?

## Summary
