

Topology Seminar

Dylan Wilson

of Harvard University will be speaking on

Variations on the theme of Lichtenbaum-Quillen

on March 29 at 4:30 in
MIT Room Zoom

In recent work with Jeremy Hahn, we established a higher chromatic version of the Lichtenbaum-Quillen conjecture for truncated Brown-Peterson spectra. This talk will explore some questions raised by the proof, and indicate some current and future lines of investigation. Some of what we will discuss is also joint with Akhil Mathew.
