TABLE OF CONTENTS

Prefa	ace		ix
The	Mat	hematics of GPS	xiii
Part	t I	Linear Algebra	
1	Veo	ctors and Matrices	3
	1.1	Vectors	3
	1.2	Lengths and Dot Products	11
	1.3	Planes	20
	1.4	Matrices and Linear Equations	28
2	Sol	ving Linear Equations	37
	2.1	The Idea of Elimination	37
	2.2	Elimination Using Matrices	46
	2.3	Rules for Matrix Operations	54
	2.4	Inverse Matrices	65
	2.5	Elimination = Factorization: $A = LU$	75
	2.6	Transposes and Permutations	87
3	Veo	tor Spaces and Subspaces	101
	3.1	Spaces of Vectors	101
	3.2	The Nullspace of A: Solving $Ax = 0$	109
	3.3	The Rank of A: Solving $A\mathbf{x} = \mathbf{b}$	122
	3.4	Independence, Basis, and Dimension	134
	3.5	Dimensions of the Four Subspaces	146
4	Or	thogonality	157
	4.1	Orthogonality of the Four Subspaces	157
	4.2	Projections	165
	4.3	Least-Squares Approximations	174
	4.4	Orthogonal Bases and Gram-Schmidt	184
5	De	terminants	197
	5.1	The Properties of Determinants	197
	5.2	Cramer's Rule, Inverses, and Volumes	206

vi Table	e of Contents
----------	---------------

6	Eigen	values and Eigenvectors	211
	6.1	Introduction to Eigenvalues	211
	6.2	Diagonalizing a Matrix	221
	6.3	Symmetric Matrices	233
	6.4	Positive Definite Matrices	237
	6.5	Stability and Preconditioning	248
7	Linea	ar Transformations	251
	7.1	The Idea of a Linear Transformation	251
	7.2	Choice of Basis: Similarity and SVD	258
Par	t 11 (Geodesy	
8	Level	ing Networks	275
Ũ	8.1	Heights by Least Squares	275
	8.2	Weighted Least Squares	280
	8.3	Leveling Networks and Graphs	282
	8.4	Graphs and Incidence Matrices	288
	8.5	One-Dimensional Distance Networks	305
9	Random Variables and Covariance Matrices		309
	9.1	The Normal Distribution and χ^2	309
	9.2	Mean, Variance, and Standard Deviation	319
	9.3	Covariance	320
	9.4	Inverse Covariances as Weights	322
	9.5	Estimation of Mean and Variance	326
	9.6	Propagation of Means and Covariances	328
	9.7	Estimating the Variance of Unit Weight	333
	9.8	Confidence Ellipses	337
10	Nonl	inear Problems	343
	10.1	Getting Around Nonlinearity	343
	10.2	Geodetic Observation Equations	349
	10.3	Three-Dimensional Model	362
11	Linea	ar Algebra for Weighted Least Squares	369
	11.1	Gram-Schmidt on A and Cholesky on $A^{T}A$	369
	11.2	Cholesky's Method in the Least-Squares Setting	372
	11.3	SVD: The Canonical Form for Geodesy	375
	11.4	The Condition Number	377
	11.5	Regularly Spaced Networks	379
	11.6	Dependency on the Weights	391
	11.7	Elimination of Unknowns	394

11.8	Decorrelation and Weight Normalization	400

12	Constraints for Singular Normal Equations		405
	12.1	Rank Deficient Normal Equations	405
	12.2	Representations of the Nullspace	406
	12.3	Constraining a Rank Deficient Problem	408
	12.4	Linear Transformation of Random Variables	413
	12.5	Similarity Transformations	414
	12.6	Covariance Transformations	421
	12.7	Variances at Control Points	423
13	Problems With Explicit Solutions		431
	13.1	Free Stationing as a Similarity Transformation	431
	13.2	Optimum Choice of Observation Site	434
	13.3	Station Adjustment	438
	13.4	Fitting a Straight Line	441

Part III Global Positioning System (GPS)

14	Globa	Il Positioning System	447
	14.1	Positioning by GPS	447
	14.2	Errors in the GPS Observables	453
	14.3	Description of the System	458
	14.4	Receiver Position From Code Observations	460
	14.5	Combined Code and Phase Observations	463
	14.6	Weight Matrix for Differenced Observations	465
	14.7	Geometry of the Ellipsoid	467
	14.8	The Direct and Reverse Problems	470
	14.9	Geodetic Reference System 1980	471
	14.10	Geoid, Ellipsoid, and Datum	472
	14.11	World Geodetic System 1984	476
	14.12	Coordinate Changes From Datum Changes	477
15	Processing of GPS Data		481
	15.1	Baseline Computation and <i>M</i> -Files	481
	15.2	Coordinate Changes and Satellite Position	482
	15.3	Receiver Position from Pseudoranges	487
	15.4	Separate Ambiguity and Baseline Estimation	488
	15.5	Joint Ambiguity and Baseline Estimation	494
	15.6	The LAMBDA Method for Ambiguities	495
	15.7	Sequential Filter for Absolute Position	499
	15.8	Additional Useful Filters	505
16	Random Processes		515
	16.1	Random Processes in Continuous Time	515
	16.2	Random Processes in Discrete Time	523

viii Table of Contents

17	Kalman Filters		543
	17.1	Updating Least Squares	543
	17.2	Static and Dynamic Updates	548
	17.3	The Steady Model	552
	17.4	Derivation of the Kalman Filter	558
	17.5	Bayes Filter for Batch Processing	566
	17.6	Smoothing	569
	17.7	An Example from Practice	574
The	Receiv	ver Independent Exchange Format	585
Glos	sary		601
References			609
Index of M-files			615
